DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to an ingestible nuclear imaging apparatus, classified in class 600, subclass 436.
- II. Claims 9-15, drawn to a method of nuclear imaging, classified in class 600, subclass 436.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the process as claimed can be practiced with any nuclear radiation detection probe that is exposed and not encapsulated. Additionally, the product as claimed can be used in a materially different process such as a method of nuclear imaging comprising scanning a radioactivity emitting source of one photon energy.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
